

GUJARAT TECHNOLOGICAL UNIVERSITY**BE - SEMESTER-V (NEW) EXAMINATION – WINTER 2021****Subject Code:2151908****Date:17/12/2021****Subject Name:Control Engineering****Time:02:30 PM TO 05:00 PM****Total Marks: 70****Instructions:**

1. Attempt all questions.
2. Make suitable assumptions wherever necessary.
3. Figures to the right indicate full marks.
4. Simple and non-programmable scientific calculators are allowed.

MARKS

- Q.1** (a) What are the standard input test signals? Give equations for the same. **03**
 (b) Compare the open and closed loop systems giving examples. **04**
 (c) Explain Force Voltage and Force-Current Analogy with Mechanical systems with neat sketches **07**

- Q.2** (a) Define the resistance and capacitance of the liquid level systems. **03**
 (b) What is transfer function? List out the properties of transfer function. **04**
 (c) Obtain the Transfer function of the block diagram given in Fig. 1 using the block diagram reduction rules. **07**

OR

- (c) Obtain the transfer function for the signal flow network shown in Fig. 2 using Mason's Gain formula. **07**

- Q.3** (a) Define State space, state variables and state vectors. **03**
 (b) Advantage and Disadvantages of state space analysis technique. **04**
 (c) Find the state space model i.e., state matrix, input matrix, output matrix and transmission matrix for a system that described by the following transfer function. **07**

$$\frac{C(s)}{R(s)} = \frac{24}{s^3 + 9s^2 + 26s + 24}$$

Also give block diagram representation for the state space model.

OR

- Q.3** (a) Explain two position controllers. **03**
 (b) Differentiate the pneumatic systems and Hydraulic systems. **04**
 (c) Obtain the transfer function for pneumatic PI controller with neat sketch. **07**
- Q.4** (a) Define: (1) rise time (2) settling time (3) steady state error **03**
 (b) Plot the system response of the first order unity feedback system for unit impulse input. **04**
 (c) Obtain analytically the rise time, peak time, maximum overshoot and settling time in the unit-step response of a closed -loop system given by **07**

$$\frac{C(s)}{R(s)} = \frac{36}{s^2 + 4s + 36}$$

OR

- Q.4** (a) Explain absolute stability and relative stability **03**
 (b) Obtain the range of K for stability of the system whose characteristic equation is given by **04**

$$s^4 + 2s^3 + (4 + K)s^2 + 9s + 25 = 0$$

 (c) Obtain a steady state error for simple unity feedback systems – having Type N= 0,1,2, for unit step input signal. Comment on desirability of the system. **07**

- Q.5** (a) Difference between transient and frequency response analysis **03**
 (b) State the advantages of frequency response analysis **04**
 (c) Draw the root locus plot for the system shown in Fig. 3. Find the break-in and breakaway points and locate on the plot. Also find the value of gain K at break-in and breakaway points. **07**

OR

- Q.5** (a) Enlist the sources of hydraulic power. **03**
 (b) Explain the hydraulic control circuit with basic elements and neat sketch. **04**
 (c) Discuss the hydraulic PI controller with neat sketch and necessary transfer function. **07**

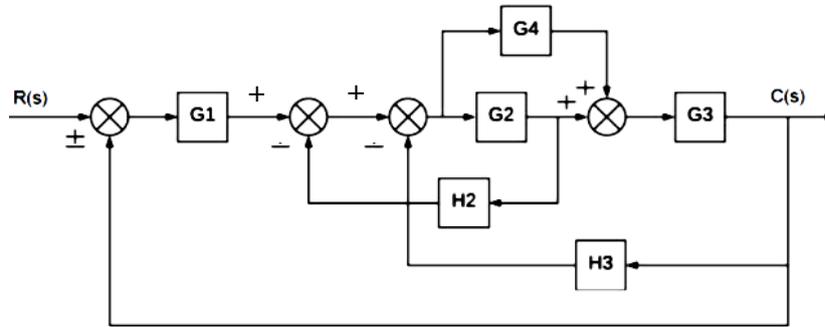

Fig. 1 Block diagram reduction (Q.2(c))

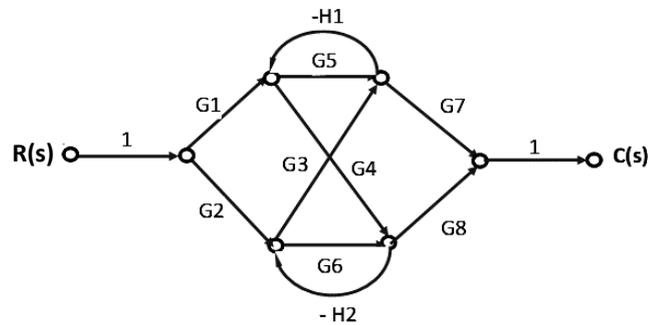

Fig. 2 Signal Flow graph (**OR** Q. 2(c))

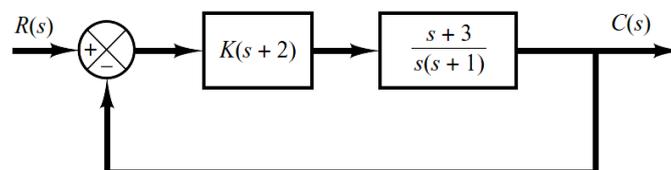

Fig. 3 (Q. 5(c))
